In 2017, ILSI SEA Region
• Organized and participated in 23 meetings
• Published 18 scientific publications

Highlights of Activities in 2017

In 2015, the Asia Pacific region accounted for 37% of the total number of diabetics in the world. This global rise in the prevalence of diabetes will have a significant impact on health care systems. ILSI SEA Region organized a symposium on October 4-5, 2015 in Singapore with the objective to review the status and latest science on type 2 diabetes mellitus and its prevalence in Asia, explore prevention and management of diabetes mellitus through strategies at individual and community levels, as well as discuss innovation, and multi-stakeholder approaches in the prevention and management of diabetes.

This regional symposium included international experts from USA, Europe, Asia, India and the SEA Region. The drivers of diabetes highlighted included high rates in the environment and socio-economic development, emphasizing the need for community interventions.

Our Strategies

ILSI SEA Region’s core strategies for maximizing our impact on public health:

- Share new scientific knowledge and research in nutrition, food safety and sustainability
- Foster harmonization in a diverse region
- Develop capabilities in the region for science-based decision making
- Support community health programs and research

Scientists Programs

Our strategies are pursued through our Scientific Programs, which are organized according to 4 Science Clusters covering a targeted range of topics.

Specific issues are addressed through Technical Committees, while research and other scientific activities may be conducted as Special Projects.
